

STACK & QUEUE

On-class exercises

1. Write a program that reads in a sequence of characters and prints them in reverse order. Use a stack.
2. Write a program that reads in a sequence of characters, and determines whether its parentheses, braces, and curly braces are "balanced." Hint: for left delimiters, push onto stack; for right delimiters, pop from stack and check whether popped element matches right delimiter.
3. Write a program that reads in a positive integer and prints the binary representation of that integer. Hint: divide the integer by 2.
4. Do a research on queue from the textbook and implement it by using an array and a linked structure
